DYNAMIC SOLUTIONS

PALLET LIVE

- High capacity storage system; ideal for storing perishable with high rotation, as well as high consumption goods with a continuous flow.
- Working on a first in, first out basis, dynamic live storage racking provides automatic stock rotation.
- Pallets are loaded onto dedicated lanes of inclined gravity rollers, when a load is taken from the picking face, the next pallet rolls into position.
- Pallet separators and speed controllers regulate pallet movement down the incline.
- Requires only two fork truck aisles; one for loading and one for picking.

CARTON LIVE

- Manual, hand-loaded Carton Live offers 'first-in, first-out' storage; ideal for areas handling and using fast moving product lines.
- Inclined trays of roller tracks allow goods to roll down dedicated lanes within the trays, from the loading to the picking face.
- Speed control reduces order picking times and helps minimise errors, as items are presented precisely at the picking face.
- Both the size and number of rollers within the trays, (and the load capacity of the support frames), are tailored to the size and weight of the items stored.
