NARROW AISLE

NARROW AISLE

- Trucks operate in aisles that are (up to) half the width of wide aisle pallet racking. Narrow aisles make excellent use of floor space and maximises the height at which goods can be stacked.
- Easy, individual access to all pallets stored.
- Specialised lift trucks are required in either 'man-down' or 'man-up' variants, allow manoeuvring in the narrow aisles between racks.
- Rails or wires at floor level guide trucks precisely into position; reducing the risk of accidental damage from user error and improving safety within the system.
- Use of cameras, indexing and RFID.
